

February 26, 2008
Urban Drainage & Flood Control District's
Annual Seminar
***Trends and Developments in
Stormwater/Floodplain Management***

2007 Updates
to the
**Urban Storm Drainage Criteria Manual
Spreadsheets & Software**

Ben Urbonas, P.E., D.WRE, Manger
Ken MacKenzie, Sr. Project Engineer
Master Planning Program
Urban Drainage and Flood Control District

Volume 1 (2007 Updates)

■ STORAGE CHAPTER

Equation (SO-13) – NRCS Soil Group C/D:

$$EURV_{CD} = 1.1 \cdot (1.1381 \cdot i - 0.0339)$$

in which, $EURV$ = Excess Urban Runoff Volume
in watershed inches,
 I = Imperviousness ratio ($I/100$)

Figure SO-8—Outlet Sizing for EURV Control with
72-hour Drain Time for On-Site Detention

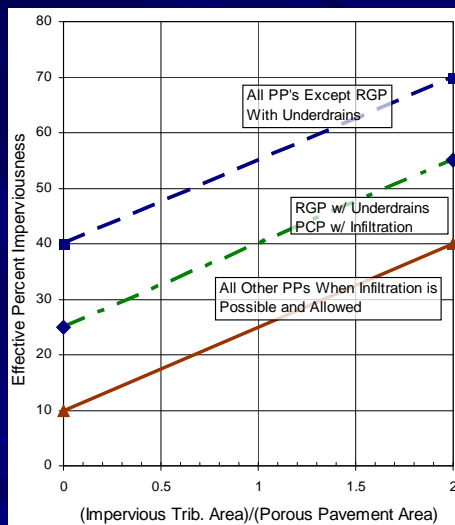

Volume 3 (2007 Updates)

■ STRUCTURAL BMPs CHAPTER

– Figure PP-1 – Interim Guidelines for
Effective Imperviousness when using
Porous Pavements

Figure PP-1

1. Chart applies only to PPs in Vol. 3
2. Apply the "Effective % Imp." to the total of porous pavement and impervious area tributary to it
3. Limit of two units of impervious area tributary to PP (imp. areas exceeding this are treated 100% Imp.
4. Effective Imp. Can be used for all hydrologic calculations to estimate flows and volumes.
5. When Imp. areas cannot be made to run onto the Perv. areas in a sheet-flow fashion, identify individual areas and the run-on ratios for each. Treat them as separate areas for compositing the site's total

Spreadsheet Updated to Support Revised Figure PP-1

| Effective Imperviousness of Tributary Catchments With Porous Pavement (PP) Using UDFCD Criteria | | | | | | | | | | | | |
|---|----------------------|-------------------------|--------------------------------|-------------------|---------------------------|-----------------------|--------------------------|-----------------|--------------------------------|---------------------------|------|--------------------------------|
| Catchment Name: <u>Best Shopping Center in the Word</u> | | | | | | | | | | | | |
| Area Units Used (Acres, sq.ft., other): <u>Acres</u> | | | Designer: <u>Joe Closenuff</u> | | | | Date: <u>30-Nov-2007</u> | | | | | |
| Sub-Area I.D. | (1) Total Area | (2) Pervious Area | (3) Impervious Area | (4) Type of PP | Porous Pavement (PP) Area | | | | | | | Total Effective %Imperv. |
| | | | | | (5) PP Area | (6) Run-on Area | Max. Run-On Area | Run-on Ratio | Allowable PP+Run-On Area | PP Effective % Imp. | | |
| A-1 | 2.00 | 0.50 | 1.50 | A-Underdrain | 0.75 | 0.75 | 0.75 | 1.0 | 1.50 | 55.0 | 41.3 | |

(4) A - All PPs underdrained except RGP;
 B - RGP w/ underdrain & PCP w/ infiltration;
 C - All Other PPs w/ infiltration (no underdrains).
Effective imperviousness of PPs recommended here are valid only for PPs recommended in Vol. 3 of the USDCM. Not valid for other types of PPs.

Figure EDB-3—Water Quality Outlet Sizing: EDB
w/ 40-hour Drain Time
(Equations valid only for WQCV Depth H < 6 feet)

Figure CWB-3—Water Quality Outlet Sizing: CWB
w/ 24-hour Drain Time
(Equation valid only for WQCV Depth H < 6 feet)

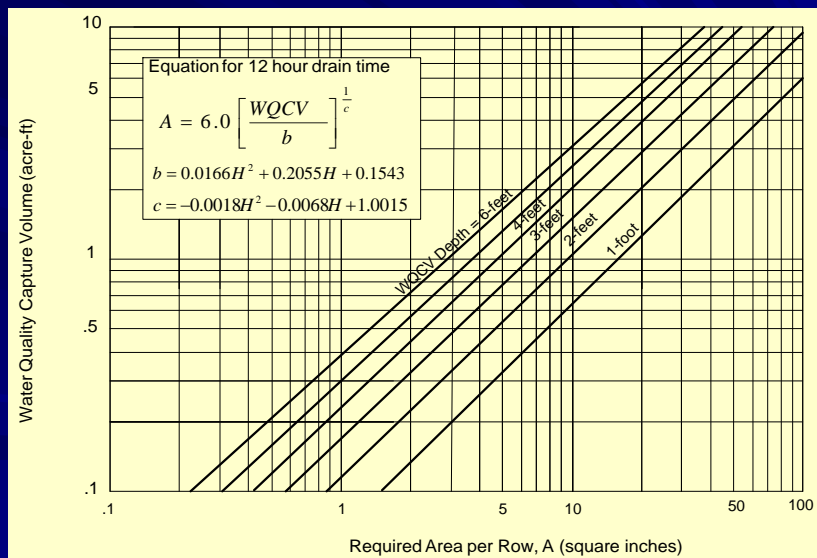

Figure RP-3—Water Quality Outlet Sizing: RP
w/ 12-hour Drain Time.
(Equation valid only for WQCV Depth H < 6 feet)

2007 Update of the Construction BMPs Chapter of USDCM Volume 3

2004 Construction Chapter

- 75 Pages
- Scanned figures (27)
- No Photographs
- Content was developed before MS4 permits were issued
- Table of Content
 - 1.0 INTRODUCTION
 - 2.0 EROSION CONTROL PLANNING
 - 3.0 EROSION CONTROL
 - 4.0 SEDIMENT CONTROL
 - 5.0 DRAINAGEWAY PROTECTION
 - 6.0 MATERIAL STORAGE
 - 7.0 UNDERGROUND UTILITY CONSTRUCTION
 - 8.0 DISPOSITION OF TEMPORARY MEASURES
 - 9.0 MAINTENANCE

2007 Construction Chapter Posted on UDFCD Website

- 97 Pages
- Most figures no in AutoCAD available for downloading (41)
- 7 Photographs
- Content was updated since MS4 Phase 1 & 2 permits issued
- Table of Content
 - 1.0 INTRODUCTION
 - 2.0 FUNDAMENTALS FOR THE MANAGEMENT OF CONSTRUCTION SITES
 - 3.0 CONSTRUCTION ACTIVITIES MANAGEMENT
 - 4.0 EROSION CONTROL MEASURES
 - 5.0 SEDIMENT CONTROL MEASURES
 - 6.0 WATERWAY PROTECTION
 - 7.0 UNDERGROUND UTILITY CONSTRUCTION
 - 8.0 DISPOSITION OF TEMPORARY MEASURES
 - 9.0 MAINTENANCE

Key Issues Addressed (1)

- Owner/contractor has to develop a Storm Water Management Plan (SWMP)
- Most local jurisdictions require SWMP be prepared **and signed by a PE**
- SWMP is used as the basis for obtaining the construction permit and compliance
- Manual provides guidance for development of SWMPs and their narrative report

Key Issues Addressed (2)

- Under the State Law, primary responsibility for INSPECTIONS are with the permit holder
- The local jurisdiction must also conduct inspections
- State and EPA may also conduct inspections at any time they choose to do so.

Principles of Erosion and Sediment Control

- Erosion controls limit amount and rate of erosion occurrence.
- Sediment controls attempt to capture eroded soils before they leaves the construction site.
- Construction activities management have to address:
 - Erosion control to limit erosion of soil from disturbed areas
 - Sediment control to limit transport of sediment off-site
 - Waterway protection
 - Construction practices management to limit pollutant movement off site from:
 - construction equipment maintenance and storage
 - from materials storage and handling.

Example How not to install a silt fence

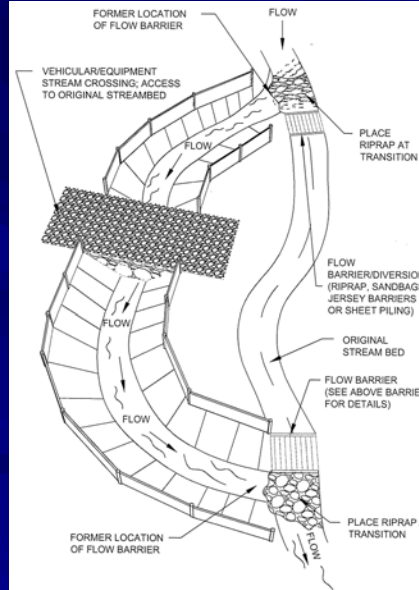

Photo courtesy Douglas County

Examples of New Details: Ford-Type Construction Crossing

Example of New Figures: Temporary Diversion Channel

Revised Sizing of Temporary Diversion Diversion – Based on Local Data

Working Within or Crossing a Waterways

- Urban Drainage and Flood Control District contracted with **Scott Olson** to develop an 1-day training class on **construction management when working in waterways**.
 - Class is offered through District
 - Look for postings on www.udfcd.org web site.
 - Fee: \$125 including lunch & coffee breaks
 - Scott Olson will talk about this class later today

***Ken MacKenzie* will now describe**
2007-2008 Updates to UD-Workbooks
Posted on UDFCD Website

2007-2008 UD-Workbook Updates Posted on UDFCD Website

- UD-Detention
- UD-Channels
- UD-BMP
- UD-Effective_Imperviouness

2007-2008 UD-Workbook Updates Posted on UDFCD Website

- UD-Detention
 - Longer hydrograph table allows up to a six hour inflow hydrograph using a one minute time step.
 - Simplification of the Modified FAA procedure.
 - A new separate “Restrictor Plate” sheet to size a circular vertical outlet with a plate over the upper portion to choke flow to a prescribed value based on head.
 - Simplification of the “Outlet” sheet, five routing scenarios and four outlet openings plus a water quality orifice plate.
 - Fixes for a few Excel 2007 compatibility issues.

2007-2008 UD-Workbook Updates Posted on UDFCD Website

■ UD-Channels

- More accurate results using the NRCS Vegetal Retardance Method
- Increased functionality using the “Riprap” worksheet
- Fixes for a few Excel 2007 compatibility issues.

2007-2008 UD-Workbook Updates Posted on UDFCD Website

■ UD-BMP

- More accurate sizing of WQCV outlets based on extensive Puls routing analysis
- Increased functionality through user-prompts

2007-2008 UD-Workbook Updates Posted on UDFCD Website

■ UD-Effective_Imperviousness

- Major rework makes it easier to calculate “real” imperviousness
- Choose from one of three categories:
 - A - All underdrained PPs except RGP
 - B - RGP w/ underdrain & PCP w/ infiltration
 - C - All Other PPs w/ infiltration (no underdrains)
