~~Re: ALERT Gaging System 2008 Maintenance Services.~~

Dear Kevin,

OneRain is pleased to present the results of our analysis of the 100-year rainfall event that hit Fort Collins last year. The following pages concisely describe the process that we used in producing the data. The data on the associated CD is:

- A movie showing the progression of the storm over the Fort Collins, Boulder and Denver region.
- A file presenting the simulated rainfall had that storm traveled over the UDFCD flood detection network.
- A file showing the points of highest radar rainfall intensity for a variety of durations.

If you have any trouble opening the files, need additional formats or have any questions please don't hesitate to contact me.

Sincerely,

A handwritten signature in black ink that reads "Jake Emerson".

Director, Field and Integration Services
