

Memo

Date: June 8, 2006
To: Kevin Stewart, Chad Kudym
From: Markus Ritsch
Subject: May 2006 ALERT Data Analysis

I. ALERT Data Source

Raw ALERT data records extracted from the Urban Drainage and Flood Control District's Nova Star 4.0 base station (ALERT 2) are analyzed for the period May 1 through May 31, 2006.

II. General System Analysis Summary

A total of 189,737 individual data records were analyzed. Meteorological sensors account for seventy-one (71) percent, water level sensors thirteen (13) percent, and rain sensors seven (7) percent of the total transmissions.

Ninety-nine (99) percent of the received data reports were flagged as "good" by the Nova Star validation process. Roughly two thousand (2,093) reports were flagged as "bad". Of these "bad" reports, approximately half (1,175) originated from the Wind Gust sensor (ID 2189) at Squaw Mountain. Another sixty (60) "bad" reports originated from the Wind Speed Average sensor (ID 2187) at Squaw Mountain. The reception of "bad" data reports from the Squaw Mountain sensor ID's 2189 and 2187 has been a consistent theme for the past five months.

The system-wide radio traffic loading was approximately six thousand one hundred (6,120) reports per day with an average hourly load of two hundred and fifty-five (255) reports. The peak hourly traffic loading was six hundred and fifty (650) reports and occurred on May 22nd between nine and ten in the evening. A plot of monthly average and peak hourly traffic loading is provided.

The sensors reporting most frequently this month include:

1. Boulder Creek at Broadway (ID 4583 this is a water level sensor that reported 4,721 times in the month or one report every ten minutes)
2. Salisbury Park (ID 2727) with 3,227 reports,
3. Urban Farm (IDs 1466, 1465, 1464, 1467) with 10,504 reports, and
4. Castle Rock (ID 2744) with 2,550.

The reports from the above sensors occurred over the entire month and are more-or-less distributed evenly.

III. Rain Sensors Reporting This Month

Approximately one hundred and fifty two (152) rain sensors reported during the month. Several rain sensor IDs had non-incrementing timer reports but had no incrementing rain tip reports during the month (Table 1).

Table 1. Rain Sensors with No Tip Reports

Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec
-----	-----	-----	-----	1020*							
-----	-----	-----	-----	1610*							
-----	-----	-----	-----	2220*							
-----	-----	-----	-----	4560*							
-----	-----	-----	-----	-----							

* Lena at Nolte Pond (1020), Holly Dam (1610), Evergreen Lake (2220), Lyons Diversion NSV (4560) – These stations do not have an installed rain sensor although they report the rain ID.

IV. Rain Sensor Timer Reporting Summary

The following summary assumes that all rain sensors have a 12-hour timer reporting interval. System-wide the base station received eighty-three (83) percent of the non-incrementing timer reports. The following table summarizes those rain sensors with the worst timer reporting performance (Table 2).

Table 2. Monthly Summary of Sensors with Poor Timer Performance

Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec
1010	1460	1460	2340	1460							
1460	1660	4820	1460	1330							
1640	4240	4570	1330	540							
--	--	--	1610	1600							
			1600	4820							

* Stapleton "Urban Farm" (1460), Roslyn (1330), Parker/Mississippi (540), Englewood Dam (1600), Doudy Draw (4820)

Sensors that are identified as having poor timer performance in multiple months are shaded with unique colors. A developing trend can be identified from the color shading as the year progresses. For example, the sensor 1460 (Stapleton) consistently has a poor timer performance value when its timer reporting is assumed to be on a 12-hour interval. If sensor 1460 has a 24-hour timer reporting interval, its timer performance is actually very good. A further inspection of the count series for sensor 1460 is made (Table 3).

The data series for sensor 1460 clearly shows that the timer reporting interval is twenty-four (24) hours, not twelve (12) hours as originally assumed. The timer reports are received at 11:57:20 pm each day.

The individual records for the other sensors shown in Table 2 were also inspected to confirm their timer reporting interval, which was found to be twelve (12) hours.

Table 3. Stapleton Rain (1460) Monthly Data Series

Date/Time	Sensor ID	Count
5/1/2006 11:57:22 PM	1460	63

5/31/2006 11:56:24 PM	1460	75

V. Rain Sensor Event Reporting Summary

A. District-Wide Total Tip/Count Statistics

The incrementing reports from one hundred and forty-seven (147) individual 1-mm rain sensors were analyzed to quantify the District-wide statistical total monthly tip summary (Table 4).

Table 4. March District-Wide Total Tip/Count Statistical Summary

Statistical Parameter	Value	Comments
Mean	19.44	Only the 1-mm rain sensors were included in the analysis
Median	16	Only the 1-mm rain sensors were included in the analysis
Standard deviation	12.00	Only the 1-mm rain sensors were included in the analysis
Mean plus three standard deviations	55.44	Several sensors for the month are outside the Mean +/- 3 Std Dev
Minimum total count	3	Multiple stations (ID 1660 and 1900)
Maximum total count	81	Powers Park (ID 1500)

A monthly summary of the District-wide mean total tip/count is presented (Table 5).

Table 5. Monthly Summary of District-Wide Total 1-mm Tip/Count

Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec
4.62	5.92	18.39	20.47	19.44							

B. Sensors with a Jump of Six or More in the Sequential Count

The following rain sensors experienced a jump in their sequential tip count of more than six (6). The data records for these sensors were visually inspected to determine the cause of the large jump.

1. Powers Park, ID 1500
2. Fire Station #12, ID 840

A summary of the visual inspection of the data records for each sensor follows.

1. Powers Park (1500)

On May 9, between 6:02 pm and midnight the count value jumped from sixty-nine (69) to seventy-six (76). This jump of seven (7) raw counts was validated by NovaStar. The monthly count series for this sensor looks reasonable and the total monthly accumulation of eighty-one (81) counts is accurate.

2. Fire Station #12 (840)

On May 17, at 11:14 am the count value jumped from thirty-eight (38) to two thousand forty-seven (2047). This invalid jump appears to be the result of field work performed at the station. The field service records should be reviewed to confirm this assumption. The total monthly accumulation of rain was eleven (11) counts.

C. Sensor-by-Sensor Incrementing Count Summary

The system-wide reception rate of incrementing rain tip reports for the month was eighty-six (86) percent. A total of 2,443 incrementing reports were received and a total of 2,858 were expected. The total loss of incrementing reports was approximately fourteen (14.52) percent. Those sensors with the worst rain transmission performance are summarized (Table 6).

Table 6. Monthly Summary of Sensors with the Most Missed Tips

Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec
640	4010	4530	2190	540							
1640	4080	4170	310	1400							
4490	4170	4820	4820	1100							
-----	-----	-----	-----	4820							
-----	-----	-----	-----	1420							

* Parker/Mississippi (540), Upper Sloan Detention (1400), Louisville Rec Ctr (1100), Doudy Draw (4820), Diamond Hill (1420)

Sensors identified as having poor event performance in multiple months are shaded with unique colors. A developing trend can thus be identified from the color shading as the year progresses.

The sensors with poor rain tip performance in May all seemed to experience a large jump in sequential count at almost exactly the same time. Between May 9th and May 10th, each sensor had a significant jump in count (Table 7).

Table 7. Jump in Count Values, May 9 - May 10, 2006

Description	ID	Date/Time	Count	Date/Time	Count	Delta Count
Parker/Mississippi	540	5/9/06 7:54:10 AM	37	5/10/06 7:47:51 PM	42	5
Upper Sloan Det	1400	5/9/06 9:34:18 AM	43	5/10/06 12:24:26 AM	49	6
Louisville Rec Ctr	1100	5/9/06 10:15:00 AM	36	5/10/06 7:14:41 AM	41	5
Doudy Draw	4820	5/9/06 12:32:46 PM	25	5/10/06 7:44:12 AM	31	6
Diamond Hill	1420	5/9/06 11:31:52 AM	28	5/10/06 12:12:59 AM	34	6

VI. Issues Continued from Previous Month

The following issues were identified last month.

1. Doudy Draw (4820) exhibits both poor timer and event transmission performance. Continue to observe data from this sensor.

VII. Issues Identified this Month

Further investigation into the following issues is recommended:

1. The PT at Boulder Creek at Broadway (ID 4583) reported 4,721 times this month or one report every ten minutes.
2. The timer reporting interval for Stapleton sensor 1460 (rain) is twenty-four (24) hours, **not** twelve (12) hours as expected. The timer reports are received each day at approximately 11:57:20 pm.
3. The timer reporting interval for Stapleton sensor 1464 (solar radiation) is fifteen (15) minutes, **not** twelve (12) hours as expected.
4. The timer reporting interval for Stapleton sensors 1466, 1465, and 1467, (wind direction, speed, peak) is fifteen (15) minutes, **not** one (1) hour as expected.
5. The ALERT2 base station was completely down and collecting zero data on May 9th from 9:35 PM through 11:28 PM. The observed behavior is most likely the result of an outage in data reception at the base station. There were general rains the evening of May 9th and significant gaps in incrementing tip reports resulted from this outage in data collection. The monthly tip reporting statistics are also negatively influenced.
6. The stations Roslyn (1330), Englewood Dam (1600), and Doudy Draw (4820) have shown poor timer performance statistics for multiple months. These stations may have poor radio paths or deteriorating radios.
7. The records for the following sensors should be reviewed in both the District's maintenance records and the long-term archival database. The rainfall accumulations for these sensors may be incorrect for periods during the month of May due to large jumps in the sequential raw count.
 - a. Powers Park, ID 1500
 - b. Fire Station #12, ID 840
